For your safety

Build on security from the market leader.

Mobile object protection for temporary events.

Anyone organising a construction site, event or other temporary assignment has to think about countless different aspects. Wouldn't it be useful if the security side of things was taken care of with a solution that works perfectly with a minimum of effort? This is where SecuriSiteTec – the rapidly installed mobile and modular monitoring system for temporary assignments from Securiton – comes into its own.

Whether you are taking care of building projects, events or temporary accommodation and sites – with the complete technical solution from the Swiss market leader, you can benefit from reliable, state-of-the-art security technology and handle your responsibilities with confidence. For example, you can see who is on site and for how long with just a few clicks. People who are no longer authorised for access are automatically denied entry. Meanwhile, night-time intruders are deterred or detected using intelligent monitoring functions – followed by an automatic alarm signal. This allows you to effectively prevent illegal work, fires, theft, vandalism and even sabotage.

Precisely tailored system sizes and monitoring periods.

The security specialists from Securiton have developed SecuriSiteTec specifically for the temporary protection of premises and property. This means you can benefit from maximum flexibility in all areas – the systems are highly mobile and can be commissioned and disassembled in a very short time. They have a modular design and thus have flexible scalability, meaning you can simply add or remove individual modules depending on the project phase. SecuriSiteTec systems are available for purchase or in an attractive rental model, meaning you benefit from high levels of cost efficiency.

The outstanding flexibility of SecuriSiteTec allows for solutions according to individual requirements, and you have exactly the equipment you need at your fingertips at all times. Even in smaller applications, no sacrifices are made when it comes to the technology used. The state-of-the-art monitoring and evaluation components work reliably around the clock. Thanks to automated processes and excellent user-friendliness, only minimal personnel is required to ensure optimal protection of your premises or property. However, SecuriSiteTec is much more than just hardware and software: Securiton also offers advice, engineering, support, maintenance and training.

SecuriSiteTec – your benefits:

- Mobile surveillance solutions for temporary assignments
- Statutory regulations are met
- Effective prevention of inconvenient events
- Full concentration on your core business
- Reliable, state-of-the-art security technology
- Experience and expertise from the market leader

SecuriSiteTec – security at the touch of a button:

- Ideal for construction sites, events and other temporary infrastructures
- Efficient assembly and disassembly, plus rapid commissioning
- Can be tailored precisely and simply to your requirements
- Excellent cost efficiency thanks to flexible use of modules
- Minimal personnel required
- Advice, engineering, support, maintenance and training from a single source

SecuriSiteTec Access – mobile access control.

Access for authorised persons only.

Temporary infrastructures such as construction sites, event locations, accommodation, etc. require tailored security solutions. Professional access and entry control with SecuriSiteTec Access ensures clarity: only authorised persons and vehicles are permitted to access or enter the site. Anyone without the necessary access authorisation – or when this has been revoked or has expired – is automatically rejected by the system at the entrance.

A few clicks on the user-friendly interface of SecuriSiteTec Access is all that it takes to see exactly who is on site, where and for how long. The cloud-based access management software offers a variety of functions for increasing efficiency: you can register third-party companies and have them validated by the security office, evaluate the time individuals spend on site or plan and manage appointments for deliveries and reservations at the unloading area with a minimum of fuss.

State-of-the-art infrastructure – from the access reader to the container.

Securiton is on hand with exactly the infrastructure you require for identity and access control on a rental or purchase basis. The identity control containers are equipped with access control systems. Specially equipped logistics/office containers are available for checking access and exit routes. Meanwhile, free-standing turnstiles with access readers, separation systems and barriers ensure clarity at the entry point. The portfolio is rounded off by combined training/office containers. When on site, the containers only require power and an internet connection.

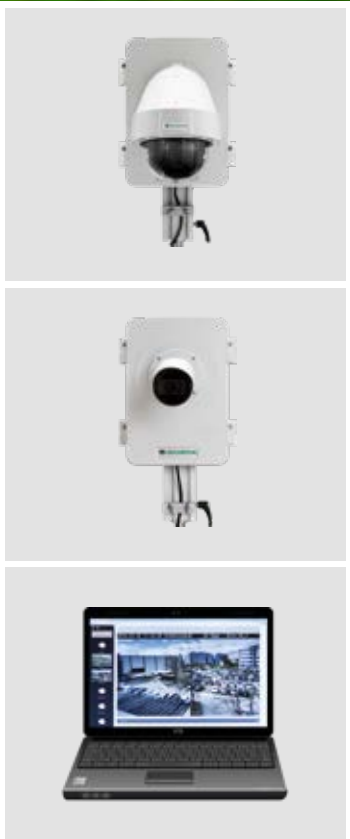

SecuriSiteTec Access is compatible with the majority of common reading technologies. The tried-and-tested access control software allows for online accreditation and real-time evaluations. Every event is recorded in the system log book. This allows for the seamless reconstruction of movements in your premises.

SecuriSiteTec Access – full control over access:

- Only authorised people are granted access to your premises
- Effective prevention of theft, vandalism, etc.
- Modern, user-friendly equipment
- Also works without on-site personnel
- Increased efficiency thanks to intelligent functions
- Flexible rental or purchase model

SecuriSiteTec Video – mobile video surveillance.

Detering and automatically detecting intruders.

Intruders of all types often go about their nefarious work with gusto. The result is theft, sabotage and vandalism on your premises or property – damage that you are then responsible for. In addition to material damage, this usually causes delays to the project and additional strain on both the budget and the nerves of those affected. Professional video surveillance with SecuriSiteTec Video offers effective protection against unpleasant occurrences.

Very often, the visible presence of surveillance cameras is enough to keep unwanted visitors away from your premises. Static, dynamic and thermal imaging cameras record every movement in a defined field of vision. Additional lighting systems with infrared and white-light spotlights are optionally available. With its intelligent surveillance functions, the system detects intruders quickly and reliably. Additionally, SecuriSiteTec Video can also trigger an optional alarm signal that is forwarded to an alarm reception centre when required.

High cost efficiency with flexible systems.

Each temporary infrastructure has specific demands in terms of video surveillance. Depending on your initial situation, you can choose between complete sets for fixed or dynamic cameras with state-of-the-art transmission technology. You can put together the exact system for any requirement by simply adding or removing modules. As the modules can be purchased or rented, you benefit from high levels of cost efficiency. When on site, the camera modules only require power and an internet connection.

In all camera modules, routers transmit the image data directly via Ethernet or 3G/4G network to the cloud-based video management application. You can use mobile terminals to access real-time and archived images in the cloud via secured connections. Alternatively, you can set up a surveillance container with fixed screens on your premises – local surveillance made easy!

SecuriSiteTec Video – for complete transparency:

- Reliable monitoring of your premises 24/7
- Deterrent effect
- Quick and reliable detection of intrusion attempts
- State-of-the-art video technology, intelligent evaluation tools
- Image transmission to mobile or fixed devices
- Outstanding flexibility in terms of system design and purchase/rental models

SecuriSiteTec Intrusion – mobile intrusion protection.

Keeps assets safe with minimal effort.

Museum relocations and alterations, valuable materials stored on construction sites and VIP hotel guests all have one thing in common: they are potential targets for thieves, burglars, robbers and other criminal elements. SecuriSiteTec Intrusion from Securiton offers professional protection wherever a permanently installed intrusion alarm system is not cost-effective. Featuring the latest monitoring technology, this mobile alarm system is quick to set up and easy to configure.

SecuriSiteTec Intrusion's thought-through design makes it easily adaptable to a wide range of architectural settings. Its radio-based components allow for ultra-fast reconfiguration when the situation calls for it. Users appreciate the simplicity of the operation, while security personnel value the reliability of the intrusion detection and alarm.

Caught in the act – thanks to multisensory detection.

Intruders hate it: SecuriSiteTec Intrusion detects their activities in all kinds of ways. Windows and doors equipped with magnetic contacts trigger an alarm if opened while the system is armed, and motion sensors detect the presence of intruders in rooms. The mobile intrusion control panel receives alarm signals from up to 48 sensors and 16 handheld transmitters via a secure radio link. You can decide what happens next: the control panel can relay the alarm directly to the police or some other alarm centre. Alternatively, SMS text messages and emails are sent to your employees' smartphones. In addition, intruders are put to flight by sirens and flashing lights.

Emergency call transmitters – which can be linked to the police via the control panel – enable you to summon help quickly. As for the handheld transmitters, they are used to arm and disarm your mobile intrusion alarm system. SecuriSiteTec Intrusion is easily scalable: the system safeguards individual parts of a building and entire premises with equal efficacy.

SecuriSiteTec Intrusion – the easy way to keep intruders at bay:

- Rapid, precise detection of intrusion attempts
- Rapid alerting of the police and other intervention services
- On-site deterrent effect
- Easy to configure and program to individual circumstances
- Simple, reliable operation
- Maximum flexibility and scalability

SecuriSiteTec Fire – mobile fire protection.

For nascent fire detection and targeted alerting.

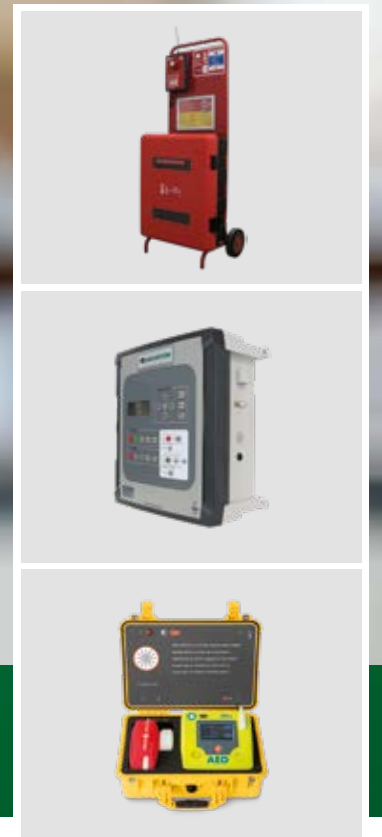

On a large construction site, immense damage can be caused by, for instance, sparks from welding equipment. SecuriSiteTec Fire helps you keep fire-related risks under control: this reliable mobile fire alarm system uses state-of-the-art technology to provide round-the-clock monitoring of your property. Its ability to detect fires while still nascent buys firefighters and on-site personnel valuable time to extinguish them before they take hold.

The latest generation of sensitive smoke detectors can be placed exactly where they are needed. Because they communicate with the fire alarm control panel via radio technology, there is no need for complex wiring – changes are quick and easy to implement. The control panel, which can be located wherever is most convenient, receives alarm signals from the smoke detectors, eliminates false alarms and instantly forwards confirmed alarms to the fire brigade. The system can also send alerts to selected personnel, for example in the form of SMS text messages.

Rapid on-site responses save lives.

Your mobile fire alarm system works fully automatically without any input from you. Additional devices and features ensure that your on-site personnel can respond quickly: the mobile fire emergency response station, for instance, is equipped with an alarm button and fire extinguishers. Pressing the button sounds a loud siren to alert everyone present, sends an alarm signal to the control panel and alerts other personnel via SMS text messages. Securiton can also provide optional quick-to-install lighting solutions for dark zones and emergency exits. Immediate, appropriate actions help save lives!

Alongside fires, accidents also present a danger to employees and others. Securiton's portable emergency kits provide rapid help. The case containing the medical emergency kit, for instance, is equipped with a defibrillator amongst other items. Opening the case automatically contacts the ambulance service, giving the precise location. As for the mobile medical emergency response station, this can be stocked with the customer's choice of first aid materials and equipment and its radio-based emergency call button can trigger medical alarms.

SecuriSiteTec Fire – effective protection for people and property:

- 24/7 reliable monitoring of your premises
- Sensitive smoke detectors for rapid, reliable fire detection
- Rapid fire localisation thanks to numbered detectors and buttons
- Automatic alerting of the fire brigade
- Broad coverage: up to 480 detectors and buttons per control panel
- Expandable with mobile emergency response kits and a medical call feature
