

**Professional access control for small-scale premises.**

**SecuriGate Compact access control system**

# Open doors – but only for those authorised to enter.

## Full access control – compact, straightforward.

You want to decide exactly who enters your building or individual rooms – and when. Securiton's SecuriGate Compact access control system offers a solution that incorporates the know-how and technology of the SecuriGate Expert professional access control system, but in a way that's precisely tailored to your SME.

There's no need to be a security expert to operate your access control system: you can easily manage your settings on a smartphone, tablet, laptop or desktop computer. You decide who may pass the individual access points and when. It takes seconds to assign users their personal access rights, which enable them to gain access using the media of their choice.

SecuriGate Compact efficiently safeguards up to 16 access points against unauthorised access. The system software's user-friendly interface provides an overview of every form of activity at your access points – even retrospectively. If required, you can also benefit from intelligent networking with other alarm and security systems such as intrusion alarm and video surveillance systems.

Securiton's specialists provide consultation and organise the planning, projection, mounting and commissioning – and subsequent maintenance – of your access control system: security from a single source you can trust.

## Incorruptible sentry offering peace of mind.

SecuriGate Compact essentially consists of an access control unit, RFID readers on the doors, door control modules, and access media. The SecuriGate Compact control unit comes pre-installed with the software application. It controls and manages all the processes: when users present their badges to an RFID reader, the application instantly checks their authorisation for the door in question. If they are given the all-clear, the door control module allows access and simultaneously reports the status of the door to the system. Every event is registered and can be monitored in real time or reviewed later.

Because all the components come from a single source and interact smoothly, SecuriGate Compact and its up-to-the-minute technology are very easy to maintain. The system is quick to install and commission by Securiton specialists. New employees or residents can be entered on a device of your choice via a web application – the process is intuitive. Distributing, changing or withdrawing access authorisations is just as easy. Intelligent, professional, straightforward: SecuriGate Compact is your door to the world of secure access.

### SecuriGate Compact – for small-scale premises with high demands:

- 24/7 monitoring of your access points/doors
- Ideal for small businesses and private homes
- Highly cost-effective thanks to a lean system structure
- Simple operation with any end device via web browser
- Backup and restore features
- Maximum investment protection thanks to future-proof technology

### SecuriGate Compact – tailor-made for your security:

- Autonomous access control system for up to 16 access points/doors
- Up to 100 active access media
- Limitless expandability thanks to simple integration into SecuriGate Expert systems
- Can be intelligently networked with other alarm and security systems
- Highly secure LEGIC advant media and reader technology with AES encryption
- Straightforward installation: needs no server installation, network integration or licensing
