 **SECURITON**
For your safety

No chance for burglars, robbers and the like.

Professional security around the clock.

Do you want to take advantage of a first-class intrusion alarm system that guarantees relaxed days and peaceful nights? With SecuriSafe 800, Securiton offers a solution that contains the know-how and technology of highly professional systems – perfectly adapted to your SME and home and to the associated risks and security needs. SecuriSafe 800 is a tailored all-rounder that offers reliable protection against burglaries, hold-ups, fire and water damage around the clock.

Thanks to its simple operation and discreet appearance, the intrusion alarm system blends unobtrusively into your everyday life. Activation, deactivation and setting of your high-performance system are simple on the touch-screen of the indication and control map or via an app on your smartphone or tablet. You also don't need to worry about other technical complications: the Securiton specialists take care of consultation, design, planning, mounting and commissioning – plus maintenance work on the SecuriSafe 800. This is safety from a single source that you can trust!

SecuriSafe 800 – for small premises with high demands:

- 24/7 monitoring of building exteriors and interiors
- Effective protection against burglaries, hold-ups, fires and floods
- Ideal for small businesses and homes
- Immediate alarm release and signalling
- Simple, user-friendly operation
- Advice, design, planning, installation, commissioning and maintenance from a single source
- Maximum investment protection thanks to future-proof technology

Built for your peace of mind.

SecuriSafe 800 consists of the control panel, indication and control maps, detector devices and signal transmitters. These components are connected to one another via bus, conventional lines or wirelessly via radio technology. Existing devices can usually be connected to the intrusion alarm system without any problems.

The **control panel** is the nerve centre of the system. This is where the signals from the detectors are received, evaluated and – when required – transmitted to an alarm reception centre. As an additional option, you can receive notifications directly on your smartphone, meaning you can observe the current situation at all times and from any location. Effective visual and audible alarm transmitters activate on-site alarms to scare perpetrators off.

SecuriSafe 800 – the benefits to you:

- System structure and components comply with the strict SES EN-CH-Grade 2 standard
- Wired or wireless installation of the detectors is possible
- Smartphone/tablet app and touchscreen for operation and display
- Can be expanded, configured and individually programmed as required
- Secure redundant power supply (mains and batteries)
- Protected remote access for customers and system installers
- Options: fire and water detection, access control (card and/or code)

The **indication and control map** and your **smartphone/tablet app** tell you at a glance what the status of the alarm system is. You can switch individual detectors on or off, acknowledge alarms or reset them. In addition, you can disarm the system when you are at home. On leaving the house, you simply arm the system on the switching device at the entrance to the house or using the smartphone/tablet app.

The **detectors** reliably keep you safe. Magnetic contacts and glass break detectors are in action outside the building, while motion detectors monitor the building interior. You can also manually trigger an alarm using hold-up detectors or equip the building with fire and water detectors and access control.
