A welcome reinforcement for your troops.

Mobile object protection for temporary operations.

Here today, there tomorrow: today's military task forces are constantly on the move. Their strategies are largely based on asymmetrical threat situations. In order to effectively protect aircraft, field camps, command posts, munitions depots and other military objects, the military needs monitoring systems that can keep pace with this high tempo more than ever. They must be so technologically advanced that they can identify attackers and intruders rapidly and with high precision and raise the alarm accordingly.

Several armed forces place their trust in SecuriWall from Securiton when it comes to temporary protection solutions for their objects and facilities. The mobile monitoring systems have been specifically developed for military applications by the Swiss market leader in security technology. They are characterised by outstanding flexibility, high efficiency and durability. The SecuriWall systems are specially designed so that they can be assembled and operated without special expertise. Whatever the weather and whatever the situation, SecuriWall is always on high alert around the clock. This then gives your troops added freedom to carry out more important tasks.

SecuriWall – your benefits:

- Mobile monitoring solutions for armed forces
- State-of-the-art technologies with innovative system concepts
- Experience and expertise from the Swiss market leader
- Optimal flexibility, efficiency and durability
- Troops can be reassigned to more important tasks

Modular system design for maximum flexibility.

SecuriWall systems can be taken along to any deployment site and adjusted precisely to your specific needs. You can benefit from maximum flexibility in all areas – the systems are highly mobile and can be commissioned and disassembled in a very short time. They have a modular design and thus have flexible scalability, meaning you can simply add or remove individual modules depending on the assignment.

The outstanding flexibility of SecuriWall allows for cost-effective solutions as you have exactly the equipment you require at your fingertips at all times. Even in smaller applications, no sacrifices are made when it comes to the technology used. The state-of-the-art monitoring and evaluation components work reliably around the clock. Thanks to automated processes and excellent user-friendliness, only minimal personnel is required to ensure optimal protection of your premises and property. However, SecuriWall is much more than just hardware and software: Securiton also offers additional advice, engineering, support, maintenance and training.

SecuriWall – Swiss-made security:

- Modular system design enables needs-driven and cost-efficient protection
- Maximum mobility for temporary deployment
- Quick assembly and rapid commissioning thanks to plug and play
- Professional protection with a minimum of personnel
- Advice, engineering, support, maintenance and training from a single source

SecuriWall M1 – for military aircraft.

Technological power for perfect monitoring.

Military aircraft are high-profile objects, particularly when they are on the ground. Securiton has developed a monitoring system for their protection that has been deployed with great success by several air forces. SecuriWall M1 creates a protection zone around the aircraft and immediately triggers an alarm when unauthorised persons enter the zone. Technical alarms (e.g. in case of power failure) eliminate the risk of sabotage and guarantee seamless monitoring.

With state-of-the art technology, SecuriWall M1 makes sure nobody comes near the aircraft unnoticed. Two mobile surveillance boxes create a field around the jet or helicopter using laser sensors. If someone breaches the field boundaries, the surveillance boxes output a local visual and audible alarm. After a definable pre-alarm time, the system transmits an alarm signal to the alarm management application on the mobile terminals of the specified recipients.

Your pocket-sized control centre.

SecuriWall M1 stands out by virtue of technological functions developed by Securiton that radically simplify efficient aircraft monitoring. Setting the monitored zone around the aircraft is incredibly simple – the system creates and saves the zone according to the movements of a person around the aircraft. As a rule, two surveillance boxes are used per aircraft and are displayed on the alarm management application.

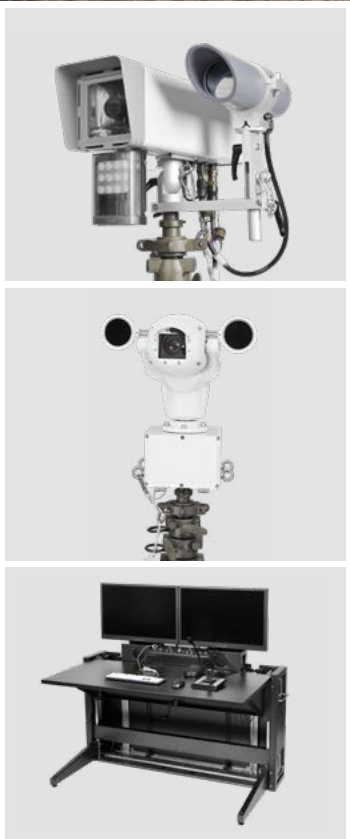

No matter where you are with your mobile device, you have the situation on the airfield fully under control. A breach of the protection zone appears immediately as an alarm signal on your application. You can view live pictures of the on-site situation by simply tapping the camera icon on the user-friendly app. When necessary, you can then dial the emergency numbers saved in the application and initiate a rapid intervention. You can also arm or disarm the surveillance boxes with the app. All data flows through high-security channels.

SecuriWall M1 – efficient and highly mobile:

- Monitored protection zone detects any approach to the aircraft
- Flexible and fast set-up of the protection zone
- Alarm reception and processing from anywhere via mobile terminals
- Lightning-fast intervention
- Simple system control and monitoring

SecuriWall M3 – for military infrastructures.

Ready for every assignment in an instant.

The SecuriWall M3 mobile modular monitoring system is all about intelligent object protection, wherever and whenever you need it. Quick to set up and put into operation, it provides your property or premises with professional protection with a minimum of personnel.

SecuriWall M3 is designed with temporary surveillance and protection assignments of all sizes in mind. The system consists of a network, different sensors, cameras

and image recording/analysis options. With its modular design, it adapts simply and precisely to the circumstances specific to each object or property and to the corresponding protection requirements. The uses and applications of SecuriWall M3 are virtually limitless. In military applications, it can be tailored exactly to the respective demands of army, navy and air-force personnel. The system handles camp and airport security with the same high levels of reliability as port security.

Plug and play – and your property is secure.

SecuriWall M3 can be commissioned in a flash using plug and play. The system automatically identifies all the components present. What is remarkable is that SecuriWall M3 is powered by one mains connection only and that the entire power and data transmission uses the unique and secure hybrid network (SCS Single Cable System). This makes installation significantly easier.

All data and messages flow into the SecuriWall M3 control centre. In terms of video management, you benefit from a high-performance package. The system contains the latest innovations in the area of video management. The IPS VideoManager software features not only top-quality video transmission, but also intelligent alarm management, scalable video recordings, video analysis and alarm checks. Plug-ins can also be used at any time to expand the functional scope of the basic software.

SecuriWall M3 – the flexible all-rounder:

- Modular system design enables needs-driven protection
- Container concept for maximum mobility
- Quick set-up and autonomous operation with own power supply
- Unique, flexible performance scope
- Maximum protection with a minimum of personnel

SecuriWall M3 – selected highlights:

- Unique hybrid network – data and power transportation in a single cable
- Sensor technology – video, radar, sonar, infrared, microwaves, fences, electric fields
- Computer-based planning and configuration
- Integrated, clear visualisation and operation
