

ULM Dongle

Universal Licence Manager

Cloud Security Client installation

Cloud Security Client

1. Go to the website: [Licence Download Manager \(dongle-registration.info\)](https://www.dongle-registration.info/)

The screenshot shows a web browser window with the title 'Licence Download Manager' and the URL 'https://www.dongle-registration.info/ldm/#/'. The page content includes the title 'License Download Manager' with a language selector 'EN'. Below the title, a message states: 'For updating the dongle, the Cloud Security Client must be installed. Please plug in the dongle, select it and then click on "Verify".' A red error box follows, containing the text: 'No Cloud Security Client could be found. Please make sure it is installed and started and press "Update".' Below the error box, there is a 'Select dongle:' label, a dropdown menu, and an 'Update' button with a refresh icon. At the bottom right, there is a 'Verify' button.

2. If you get this error message, then the Cloud Security Client must be downloaded and installed.
Download the file "CloudSecurityClientSetup.exe" via the link "Cloud Security Client" on this page and then run the file.
3. Go again to this page www.dongle-registration.info
4. The browser is now ready for the verification and update of the dongle.
